### Challenge

The Baltic Cable started operations in 1994 with a max transmission capacity of 600MW. Its physical behavior requires balance group management, up to now performed by its mother company. Unbundling requires separated operations; hence a new solution was needed. The special challenge was to meet all technical and legal constraints and to completely automate all primary and secondary processes while maintaining a lean and efficient setup.

### Likron's Solution

From several potential solutions the fully algorithmic solution was chosen due to lowest cost, highest transparency and best controllable risk factors.

### Result

Likron gained deep insights into the complete process chain of a BRP. As a side product, a full Urgent Market Messages interpreter was built and asset model integrated into the solution. Baltic Cable AB's gain is a very transparent, stable and cost-efficient setup.

***„Likron's friendly team convinced us with a pragmatic and prudent approach and a deep understanding of current and future challenges. We enjoy working together at every level.“***

**Lutz Landwehr,**  
Commercial Director, Baltic Cable AB
